

CRACOVIA

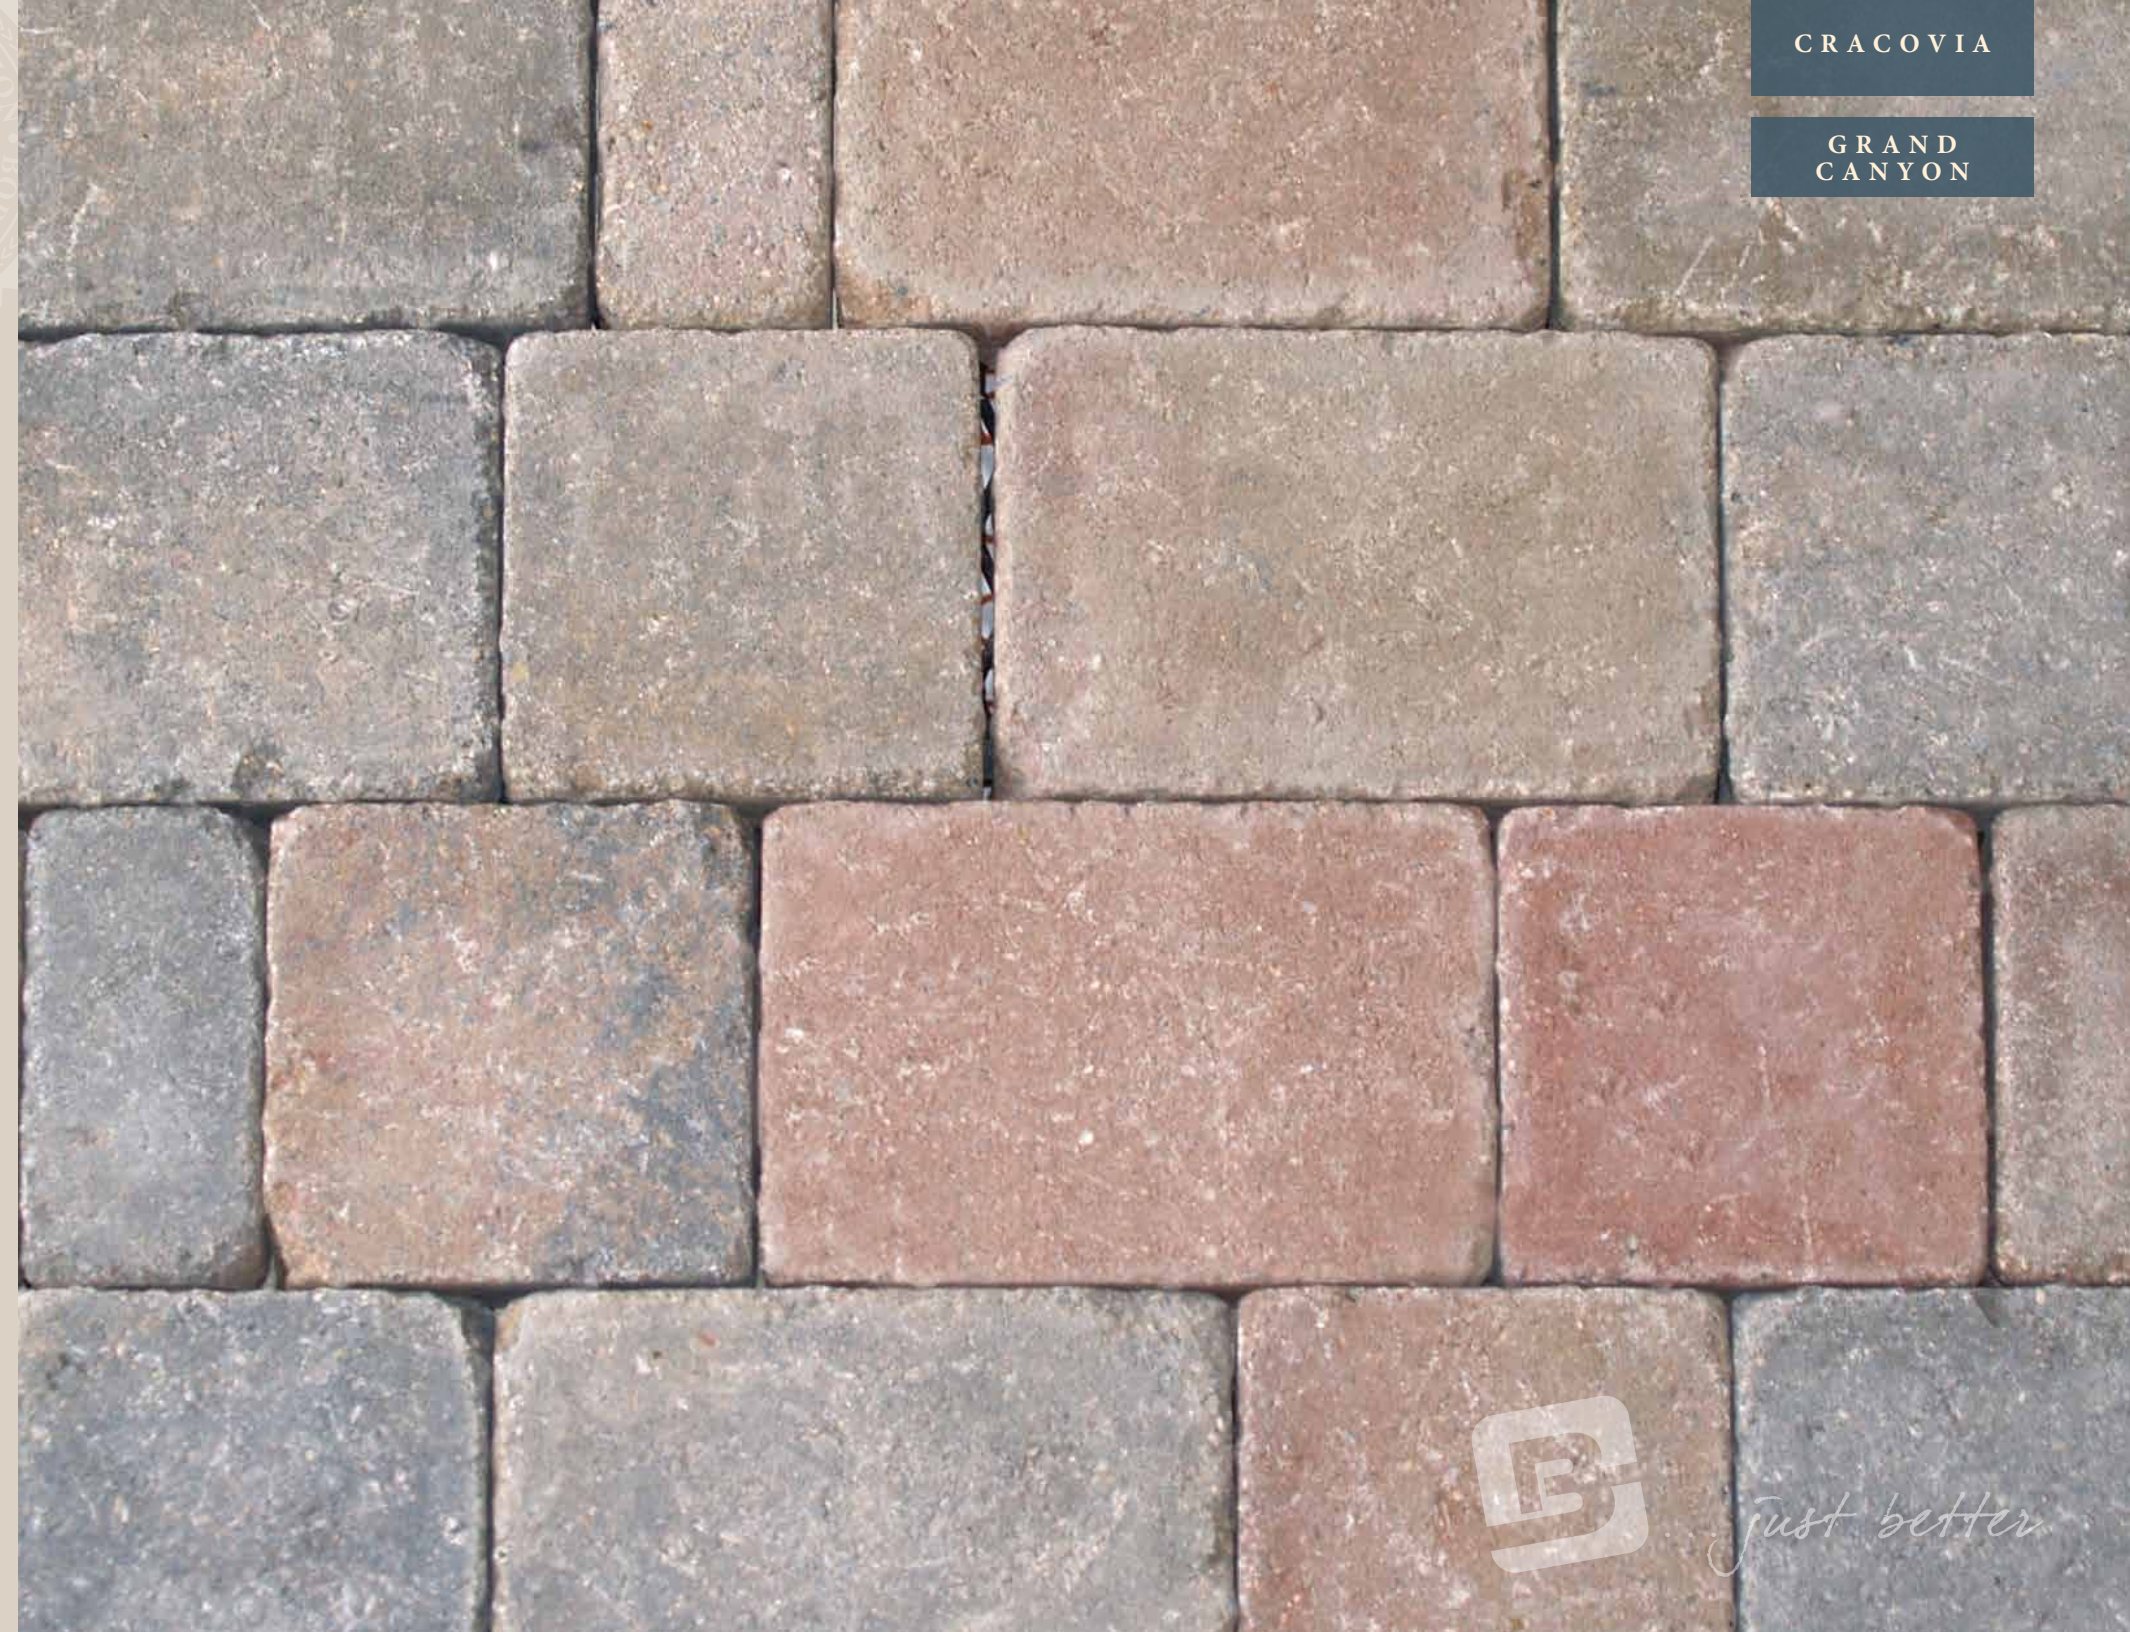

Reminiscent of the Stone Age, when people's ideas of building were somewhat limited, Borgert Products created a simple, yet durable eye-catching system. Our tumbling process creates a sculpted appearance to each paver and our carefully formulated new colors will take you back to Medieval times. This system protects our customer's investment by ensuring performance in its simplicity.

MADERA  
WALL

This unique retaining wall design that has seven different sizes is called Madera. It is hard split and then aged to give it a natural stone effect. Madera can be designed for freestanding or gravity walls – two functions in one. The most unique aspect of this wall is that there are no mechanical connections such as lips or pins – meaning no extra costs or hassles. The pieces range in length from 8" to 32", and using all the pieces in one wall is like building with LEGO® blocks – fun and creative. This wall will give you more choices than any other on the market.

BORGERT  
STEP UNITS

Our 48" w x 18" d x 6" h Step Unit is an attractive and cost-effective alternative to using expensive granite or natural stone. The Step Unit can be cut or split to fit your installation and is a lot easier to install than smaller retaining wall step units.
